**Subject:** Haystack water sample results  
[Navajo Water Samples.kmz](#)

Randy,

The attached file has all the water sample results – including Atlas data plus sampling done since.

16T-521 Platero Well – 1.2 miles NE of Haystack No. 1

This is one of the 29 contaminated water sources identified in the Five-Year Plan. Based on 2008 EPA sample result, the well has uranium and adjusted gross alpha above DW standard, and beta at levels that would trigger further testing at public water systems. Metal sign was posted at the site warning of uranium levels. The well was once shut down, but then I saw it back in service – I don't remember whether it was in service in August.

Helen Martinez 1.4 miles WNW of Bibo Trespass uranium was non-detect and other rads below MCL

Linda
